

Department of Communications

Advertising Transformation Index (ATI)

23 August 2004 Final report

1.0 Introduction

1. Introduction

The purpose of this study is to:

- 1. Conduct survey of above the line (ATL) advertising spend for the period August 2002 to October 2003, excluding below the line (BTL) promotions
- 2. Focus analysis on Television, Radio, Magazines, Outdoors and Newspapers
- 3. Conduct comparative analysis with the ATI 2002 report

1. Introduction (1)

The objectives of the study are to:

- 1. Measure total media spending by government and the private sector
- 2. Measure total media spending by private sector
- 3. Measure total media spending by government
- 4. Analyse advertising expenditure patterns for both the industry and government

1. Introduction (2)

The aim of the report is to:

- Present the profile of media spending by race and LSMs versus both the population and the profile of people accessing the medium
- 2. Attempt to look at proportional and disproportional spending versus audience size amongst the specific players, within each medium
- 3. Identify the government's spending patterns

1.2 Some Definitions

Above the line adspend	Above the line adspend is the advertisement spenditure in formal media such as television, radio, cinema, Internet, newspaper, magazine, knock and drop and outdoor.
Blow the line adspend	Blow the line adspend is the advertisement expenditure that advertisers used that do not fall under formal media. This could be in the form of brochures and pamphlets distrubuted in shops or in the street, or various promotion activities that do not involve formal media. AC Nielsen's ADEX do not measure Below the Line adspend
Audience Population	Population who are audience for the specific media, including readership in the case of the print media.
Adspend	Advertising expenditure
AMPS	All Media Products Survey
ADEX	Advertising Index

2. Methodology

2.1 Methodology

- The 2002 ATI report was used as a baseline for designing the structure of this report.
- Data was gathered from sources of advertising and media market data.
- Verification of the integrity of the data was done by comparing the year on year data and discussing with the AC Nielson Research department.
- Analysis was made for the 2002 and 2003 data in order to create trends information. We found it not helpful to do analysis for a 15 months period (August 2002 to October 2003) as this would not make it possible to do trends analysys.
- The Amps data was used to do calculations leading to Adex/AMPS data overlay to indicate which segments of the population are targeted by the advertisers
- The report will show a graphical presentation of the advertising trends for 2001 to 2003.

ADEX and AMPs Data

ADEX Data

- ADEX database is produced by AC Nelsen
- ADEX provides a detailed and most comprehensive adspend in all above the line advertisement Nationally

AMPS Data

- AMPS Database is produced by South African Advertising Research Foundation (SAARF).
- AMPS Database provides a detailed and comprehensive data on the market audience and spending trends of the South African population in various media outlets. The data provide data in various populations categories such as LSM and race
- ADEX and AMPS data are overlayed to provide insight into distribution of adspend to various population groups.

3. Relative Reach Various Radio Stations

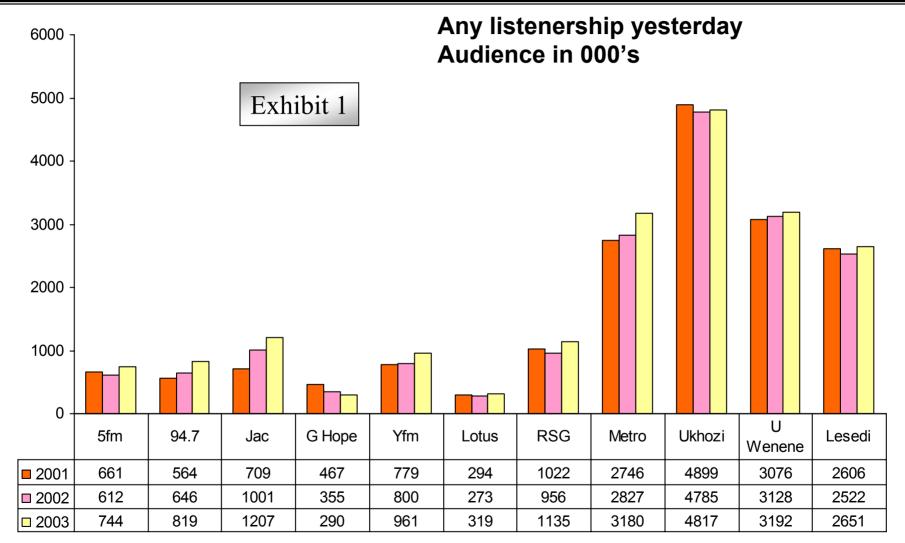

3.1 Overview

- Relative Reach Potential of Various Radio Stations was measured against all adults.
- Amps data was used to analyse the audience growth trends.
- There is a big difference in reach between most PBS stations and private regional stations.
- Exhibit 1 next page shows the Any Listenership yesterday Audience in 000's

3.2 Relative Reach Potential of Various Radio Stations Measured Against All Adults

3.3 Comments

The trends observed in the last 3 years are quite revealing

- It is virtually impossible to perfectly balance spend levels to size of audience as the base cost and rate card structures are factors that cannot be controlled
- Each media owner sets a rate that they believe the market can bear, without negatively influencing the level of demand
- A fine balancing act for any media owner and one that in the South African market is not a transparent process

4. Above-the-Line Adspend

4.1 Definitions & Exclusions

- "Below-the-Line spending is not measured by Adex. The combination of Below-the-line and non-measurable media could potentially be as high as the measured Above-the-Line portion, i.e. we are possibly only capturing half of the communication spending " {AC Nielsen}
- This BTL spend may be directed to the lower LSM groups as access to ATL media is limited and may result in a very different spending profile if this data could be captured
- The detailed analysis has been done using Adex data exclusive of self promotion (i.e. spending within own media vehicle). Everything is tracked at rate card levels i.e. volume discounts/compensatory spots/added value/agency discounts are not taken into account as stipulated in the TOR.
- The big 4 media types are TV, Radio, magazines and newspapers.
- The following analysis based on the "big 4" media types is representative of over 80% of the media spending (excluding self promotion), i.e. media covered in AMPS research
- All recruitment, classifieds and notices also fall outside of measured spend

4.1Definitions & Exclusions (continue)

- Unfortunately it is not possible to profile all media types either because the Adex data has not been collected in such a way to provide breakouts or the AMPS question is too broad. Cinema, Internet, K&D, Outdoor have been excluded for this reason
- Although free sheet newspapers are captured by Adex they are currently not measured in AMPS and are therefore excluded from the exercise
- Community radio was not captured by Adex in 2001 and was therefore excluded from the analysis. The value of those community radio stations that were measured by AdEx in 2003 was R2.5 million
- In addition outdoor has now been broken out and can now be included in the analysis
- Black = The combination of Black, Coloured and Indian

4.2 SA Adspend 2001 to 2003 by medium

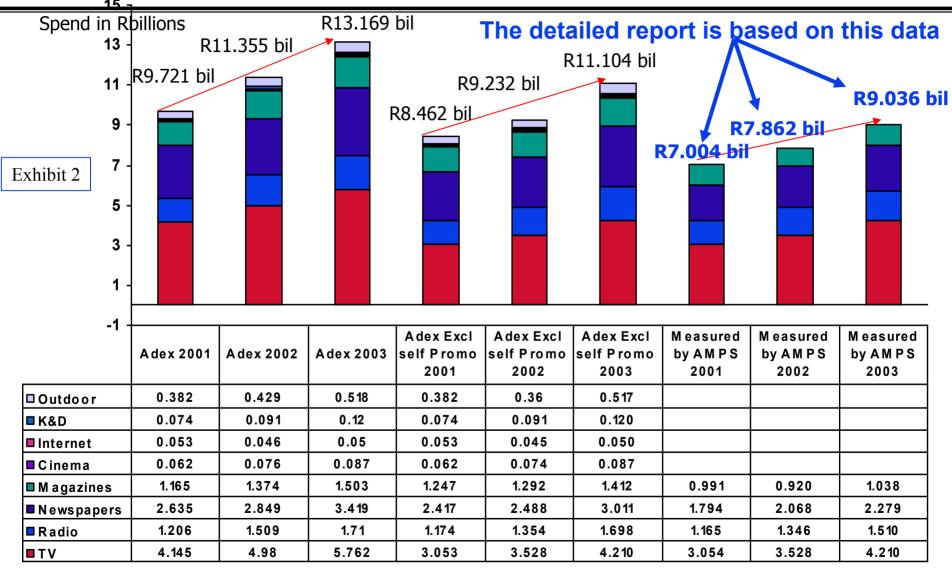

- Analysis of the all media outlets from 2001 to 2003.
- Comparison of adspend for all outlets measured by Adex and those measured by AMPS.
- Breakdown in all adspend using AMPS Data overlaid on Adex data
- The Big 4 Adspend growth from R7004 m in 2001 to R9036m in 2003 (29%)
- The overall all media outlets adspend growth from R9721m in 2001 to R13169m in 2003.(35.5% growth)

4.2 SA Adspend 2001 to 2003 by medium

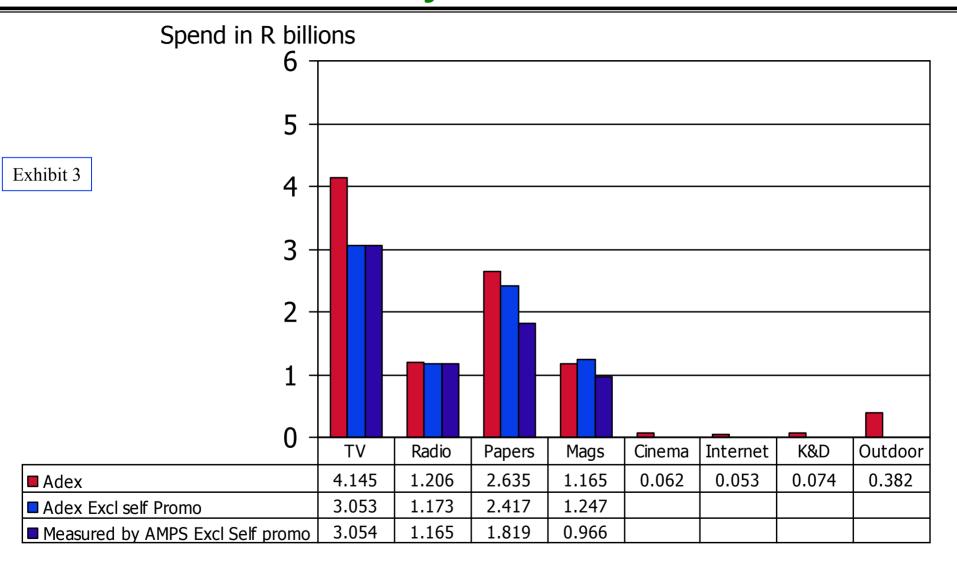

The analysis is based on media measured by both Adex and AMPS to enable overlay between the two databases

4.9 Advertising Growth Rate Over The Period

- Exhibit 2 to 8 shows the trends in adspend by media type
- The detailed report is based on media which are measured by both Adex and AMPS
- Media achieved a compound annual growth of 13.5% in advertising over the measured period for the measured media
- Radio and newspaper growth rates of 13.9% and 12.7% respectively, were close to the average
- Television growth of 17.4% was the highest
- Magazines had the lowest growth rate at 3.8%

5 Profile of Media Spending Versus Population and People Accessing Each Medium

5.1 Measuring Audience profile

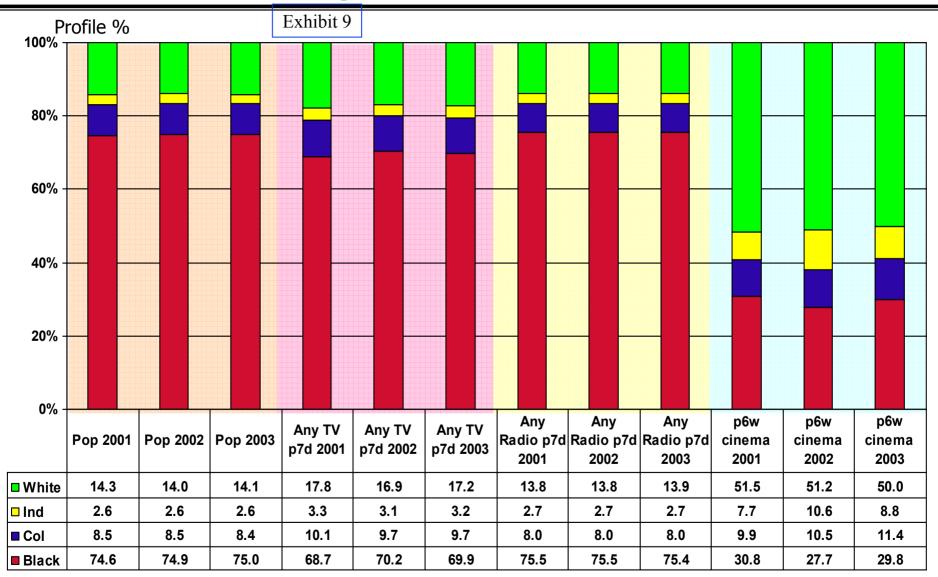

- In order to measure the race profile of each medium AMPS 2001B, 2002B and 2003B were used.
- The following measures against Adults (16+) were used:-
 - Television past 7 days
 - Radio past 7 days
 - Newspapers Average issue readership
 - Magazines- Average issue readership
 - Cinema past 6 weeks
 - Outdoor past 7 days

5.2 Audience Profile of Electronic Media vs the Population: 2001 to 2003

5.6 Black Access to Media is Mixed

- The black population has good access to television and radio
- In comparison, there is little access to cinema by black audiences
- Better access to magazines and newspapers in the black population, but still somewhat low due to literacy problems
- Radio and outdoor are the best media for accessing the black population as a whole

6. Advertising Transformation Index

6.1 Advertising Transformation Index

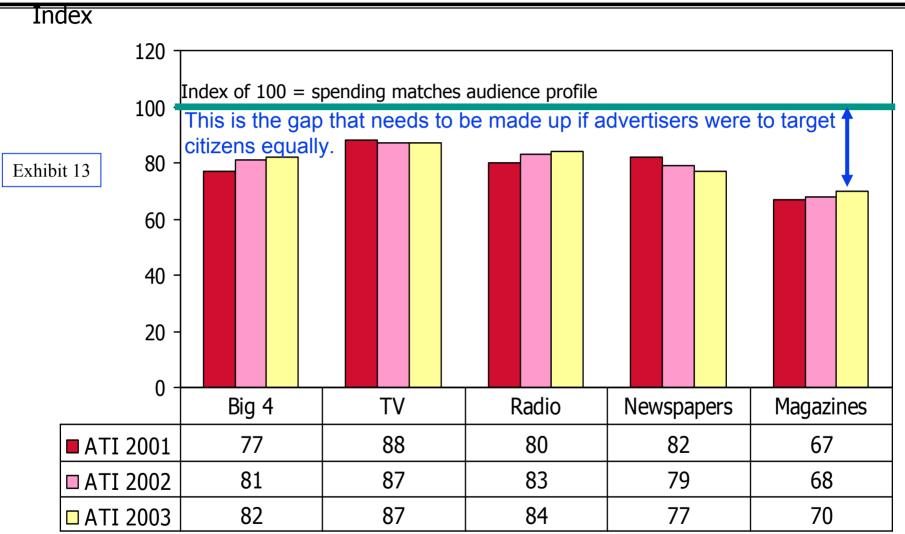

- Assuming all adults in South Africa are equal and factors such as employment / education and income status* were not critical in determining where advertisers spend their money
- The profile of media spending within a medium should match the audience profile the same medium attracts
- E.g. if a medium's audience is made of 20% Black consumers (combined Black, Coloured and Indian), then the spending profile within that particular medium should ideally be 20%
- Indeces greater than 100 show that a medium receives a higher spending against Black audiences than the medium profile, and indeces less than 100 illustrate the opposite.

^{*} This deficiency in the previous study is addressed later in this report

6.2 Index of 2001 & 2003 Black spending against Black Audience profile

Note: Black = sum of Black ,Coloured and Indian audiences and spending.

6.3 Comments

- Black consumers are under-supported with advertising within the top 4 media.
- Magazines fall behind the other media in that spending against Black audiences is lower than the proportion of Black people accessing the medium
- We believe that the under-support of black consumers in the magazine market is due to:
 - the significant segmentation of audiences in this market via focused titles, with the high-profile titles targeted at White audiences, and high-circulation low-profile magazines targeted at black audiences
 - the fact that the level of Black readership is exaggerated by sharing of magazines and the suspicion, based on anecdotal evidence, that magazines have a longer shelf life in black homes

6.4 Comments (continued)

- A positive factor is that the under-support of black consumers by the top 4 media has been declining over the last three years overall, and specifically for magazines
- This is, however, not true for newspapers as advertising has not yet grown to reflect the growth in audiences for the Sunday Sun and Daily Sun, and their derivatives
- It must be noted that a lot of "cross over" media exist and that few media vehicles are either Black or White
- In light of this factor perhaps some of the onus lies with the media owners to attract the right profile of audience and not all the "fault" of the media planner.

6.5 Profiling Adspend through LSMs

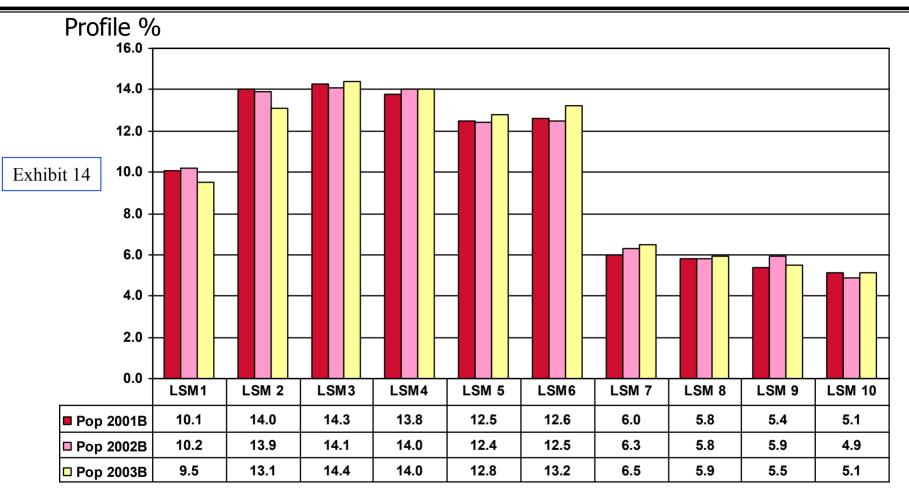

- Adspend profiling using LSM analysis shows where the focus of advertises and media planners is.
- We first look at the population trends in terms of LSMs for the period under review
- Exhibit 14 to 23 bring variety of information based on what the spending patterns by population groups are expected.
- An analysis of the "big 4" media outlets shows who the biggest adspend is targeting

6.6 Population profile by LSM

6.7 SAARF Universal LSM Groups

	Р	enetratio	n	Average Household Income						
	2001B %	2002B %	2003B %	2001B	2002B	2003B

Source: AMPS 2001BpAMPS 2002BZ&CAMPS 2003

6.8 Comments

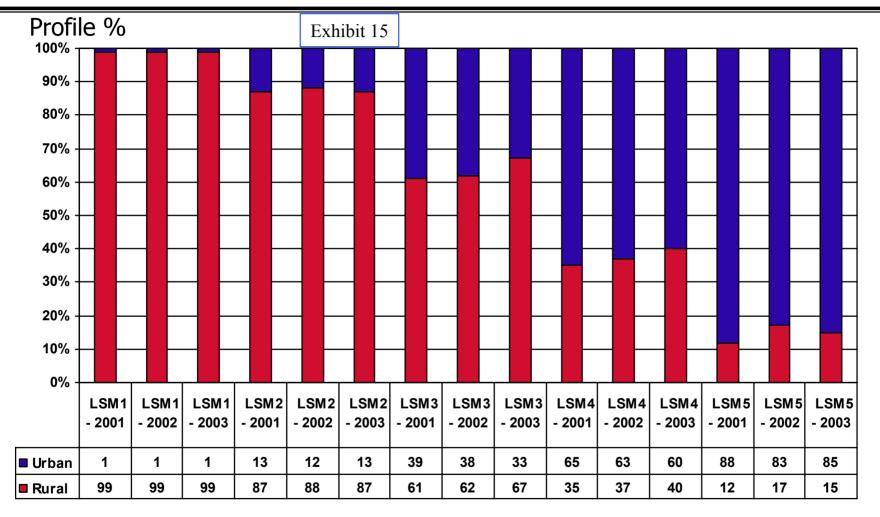

- There is a definite shift up the LSM chain, particularly out of LSM 1 and 2 into LSM 3
- This is likely driven by the government's welfare spend, improved pension payouts and urbanisation
- There is also growth in the middle class at LSM 4, 5, 6 and 7 driven by BEE, affirmative action and recognition of black corporate skills
- This bodes well for media growth, particularly media targeted at black audiences

6.9 LSM Group Urban/Rural Profiles: 2001 to **M**s

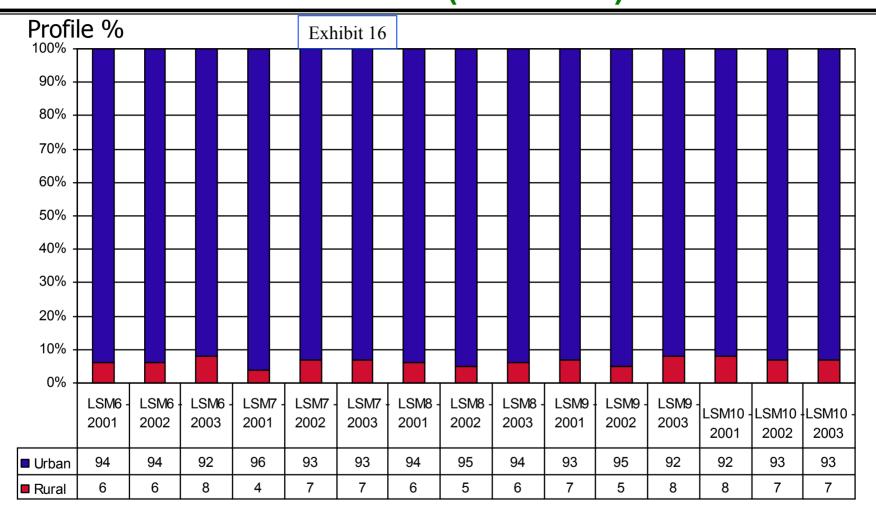

6.10 LSM Group Urban/Rural Profiles: 2001 to 2003 (continue)

6.11 Comments on Rural/Urban LSM Profiles

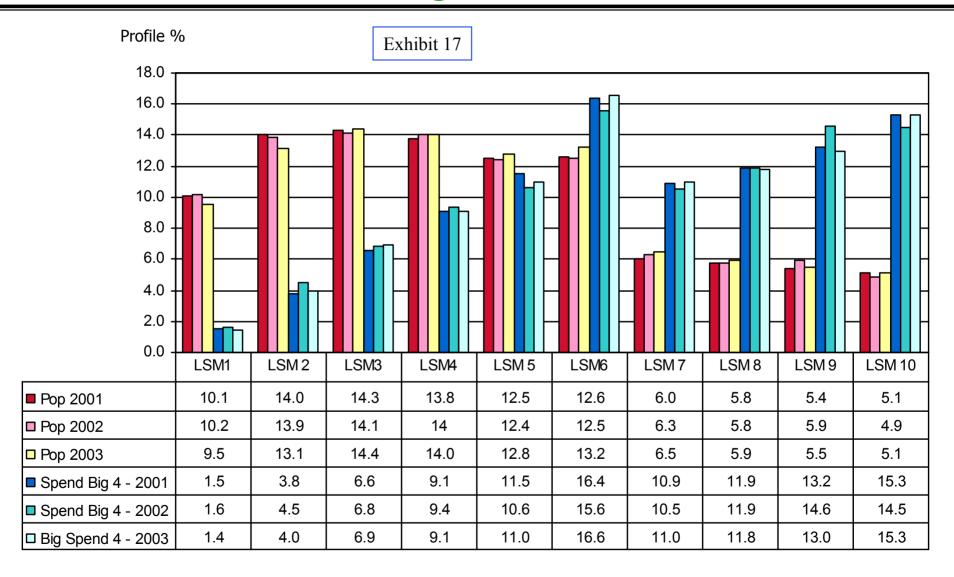

- There is a direct link between living standards and urbanisation, i.e. the lower LSM's are skewed towards rural areas
- LSM 3 and 4 show signs of growth in the rural skew.
 We believe that this may be due to improved welfare and pension programmes targeted at rural communities

6.12 Population Profile by LSM vs Spend Profile of the Big 4: 2001, 2002 & 2003

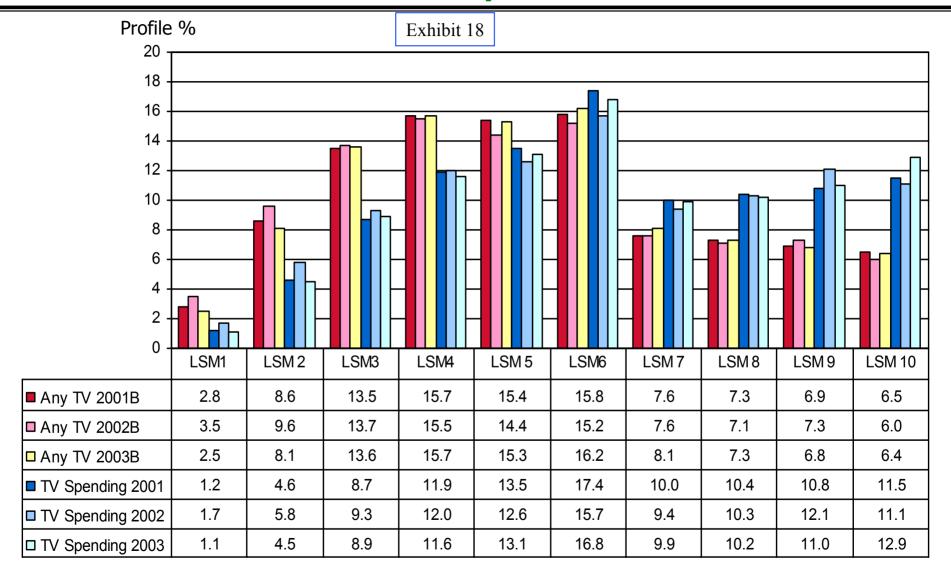

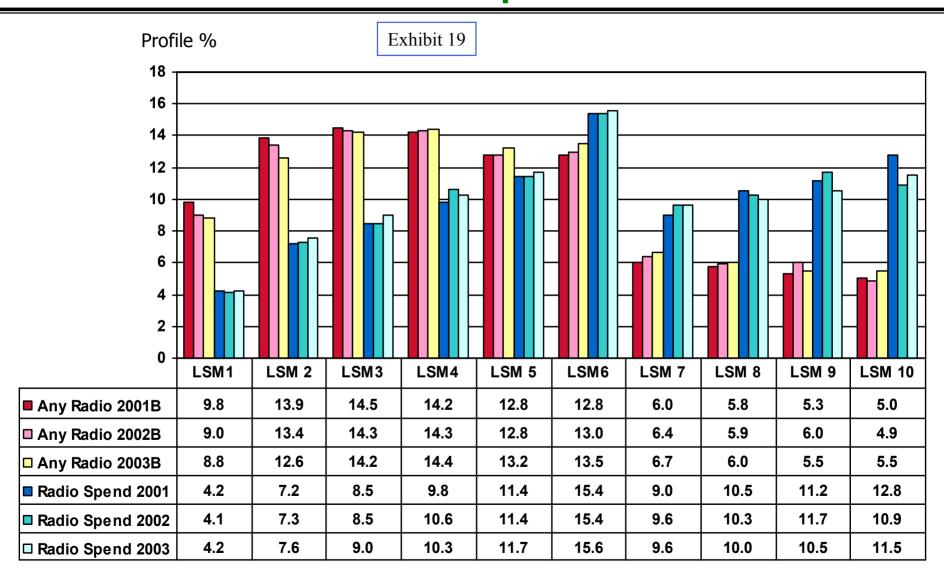

6.13 Any TV Profile by LSM vs 2001, 2002 & 2003 TV Spend Profile

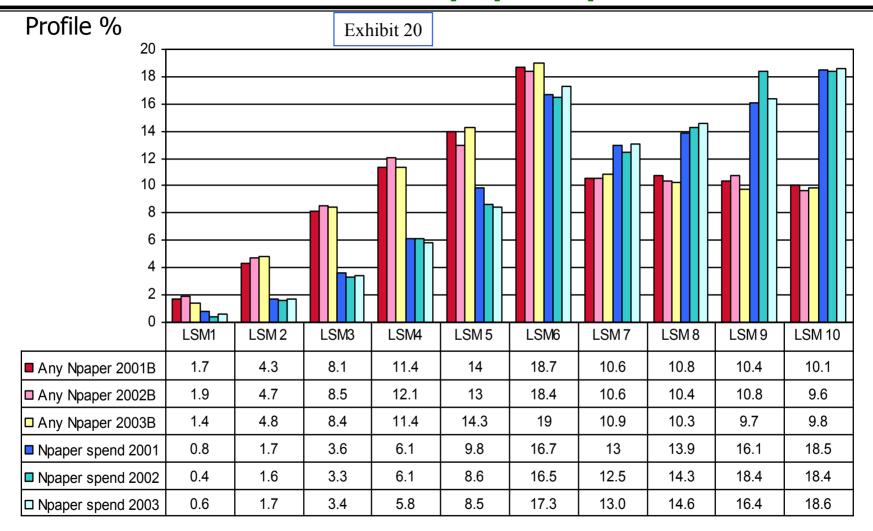

6.14 Any Radio Profile by LSM vs 2001, 2002, 2003 Radio Spend Profile

6.15 Any Newspaper Profile by LSM vs 2001 2002 & 2003 Newspaper Spend Profile

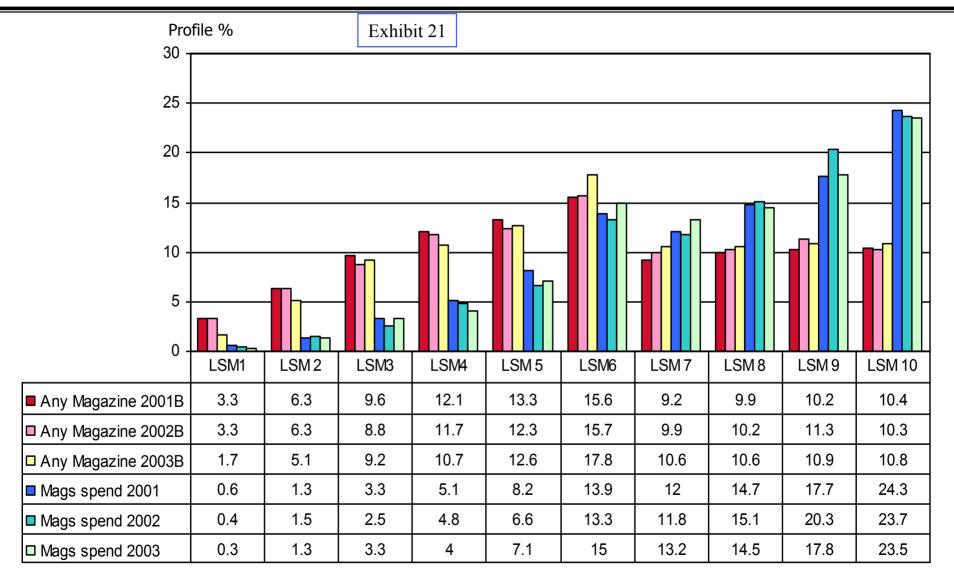

6.16 Any Magazine Profile by LSM vs 2001, 2002, 2003 Magazine Spend Profile

6.17 Comments on spending by LSM group

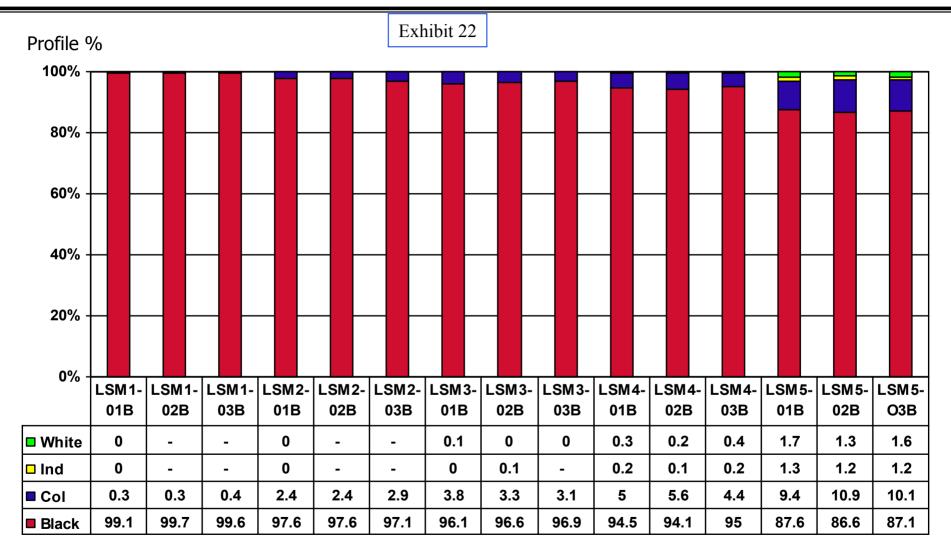

- The best match is newspapers, because readers are generally on the higher LSM's and thus warrant higher adspend
- The magazines match is below newspapers' because of higher readership of magazines than newspapers in lower LSM's due to longer magazine shelf life in black homes
- Radio has the worst match because it has the best reach of lower LSM's, which do not have high buying power
- Advertisers clearly target affluent audiences

6.18 LSM1-5 Group Race Profiles

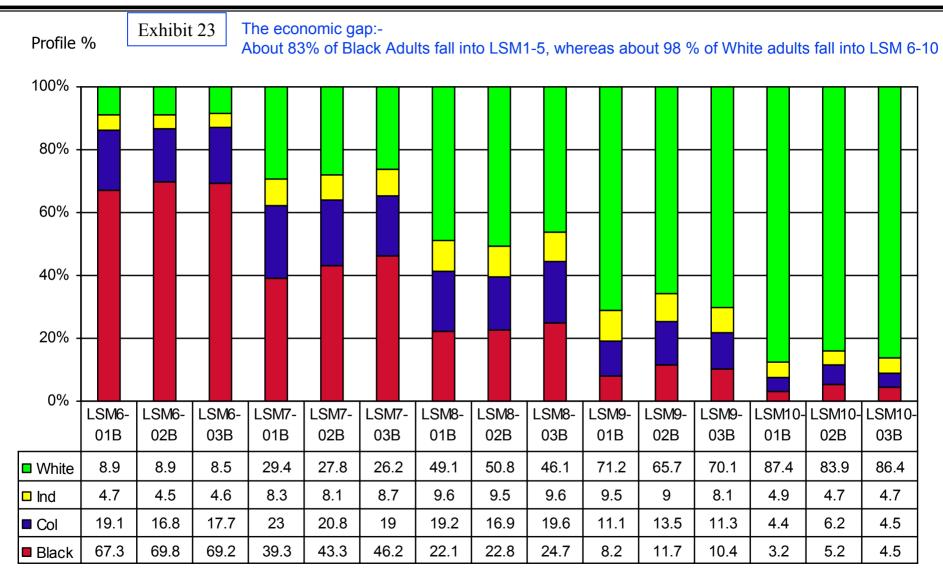

6.19 LSM6-10 Group Race Profiles

7. Proportional and disproportional spending versus audience size SOV/SOA

7.1 (Adjusted) Advertising Transformation Index

- Assuming all adults in South Africa are equal and factors such as employment/education and income status were not critical in determining where advertisers spend their money
- Share of spend against Black consumers (i.e. the share a particular media vehicle gets of the investment to that medium), should ideally be equal to the share of Black audience that same medium or vehicle draws.
- If the vehicle receives a disproportionately high investment relative to its audience size, this is shown by an index above 100.
 - Conversely, if a vehicle receives a disproportionately lower share of spend relative to its share of audience, an index below 100 would result.
- However, this approach does not take the value of audiences into account
- We have developed a new index, the Adjusted Advertising Transformation Index (AATI), which applies an LSM rating against the old Advertising Transformation Index (ATI)
- The AATI thus assumes that all adults in South Africa are NOT equal

Copyright 2004 Z-Coms

7.2 Definition of concepts used in analysis

	DEFINITION
ATI	Advertising Transformation Index, which measures the value of advertising for a specific station / title against the size of the audience for that station / title. For a perfect match of advertising volume to audience, the value of the ATI would be 1.0.
AATI	Adjusted Advertising Transformation Index, which factors in the LSM profile of a station / title, and applies it to the ATI. There is no ideal AATI, and the ratio serves to indicate the skew in advertising spend in relation to audiences and LSM's.
sov	A station / title's percentage share of the total audience for that media type.
SOA	A station / title's percentage share of the total advertising cake for that media type.
LSM Index	Weighted average of the LSM for each station / title. Indicates the average LSM profile for each station / title. This is the factor that is applied to the ATI to derive the AATI.

7.10 Index of 2003 Radio Share of Spend, Share of Audience against LSM Profile

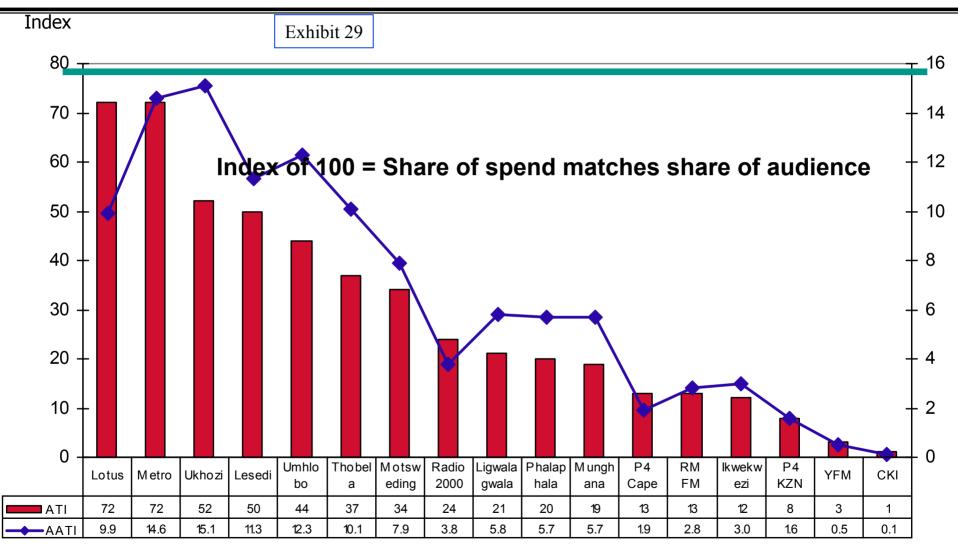

Source: AMPS 2002B & ACNielsen - Adex 2003

7.11 Index of Radio Share of 2003 Spend vs Share of Audience

7.12 Comments

- The SABC vernacular stations in particular, are negatively affected by the current spending patterns, even when accounting for their lower LSM profile
- Some of English and Afrikaans regional stations also find themselves in an under-investment situation
- Traditionally "Black" profiled stations are cheaper to buy ie the cost of buying maximum reach at a set frequency level may be half that of a "white" profiled station
- The "niche" regional stations catering for upper income households appear to be the most advantaged

7.13 Other factors at play

- There is over-investment in high profile stations, regardless of the value or size of the audiences
- While race (of listeners) is a factor in this over-investment, it is not the only factor, and probably not the most important since for many high profile stations, black listenership has been growing along with overinvestment
- However, we believe that marketing and sales promotion may be the defining factor, in other words, the stations owned by Kagiso, Primedia and NAIL are better marketed than SABC stations and the P4's
- Race may be also be factor in the sales promotion and marketing process, rather than in relation to the profile of listenership, i.e. how critical are personal relationships in the selling of airtime?
- Several SABC stations are subject to leakage, i.e. because they cover wide regional areas or the whole country, they are inefficient in their reach of target audience (radio is inherently a regional medium!)

7.19 Index of Television Share of 2003 Spend vs Share of Audience

Source: AMPS 2003B & ACNielsen – Adex 2003

7.20 Comments

- Pay TV has a clear advantage.
- A few thoughts as to why....
 - The economics advertisers want the few with money.
 - Bigger stations are always disadvantaged and vulnerable to erosion (of audience and adspend) by the niche media which often provide a closer match on lifestyle e.g. Discovery Channel. Fragmentation is a global phenomena.
 - Familiarity planners go with what they know.

Comments

- Black publications really only attract low-income audiences, thus affecting their attractiveness to advertisers
- Niching ensures that the skew in ratings is pronounced
- Business, Lifestyle and Afrikaans titles have the advantage.
- A few thoughts as to why....
 - Niche titles seem to have the advantage over the "generalists"
 - Business is probably the largest "niche" advertising sector.
 - Afrikaans publications all seem to be receiving a disproportional advertising share – perhaps this is the 2nd most desirable sector. Limited choices exist in this sector.
 - There is chronic fragmentation within the English titles
 - The age and maturity of a publication may also play a role
 - The economics advertisers want the few with money
 - Familiarity planners go with what they know

Index of Newspapers Share of 2003 Spend vs Share of Audience

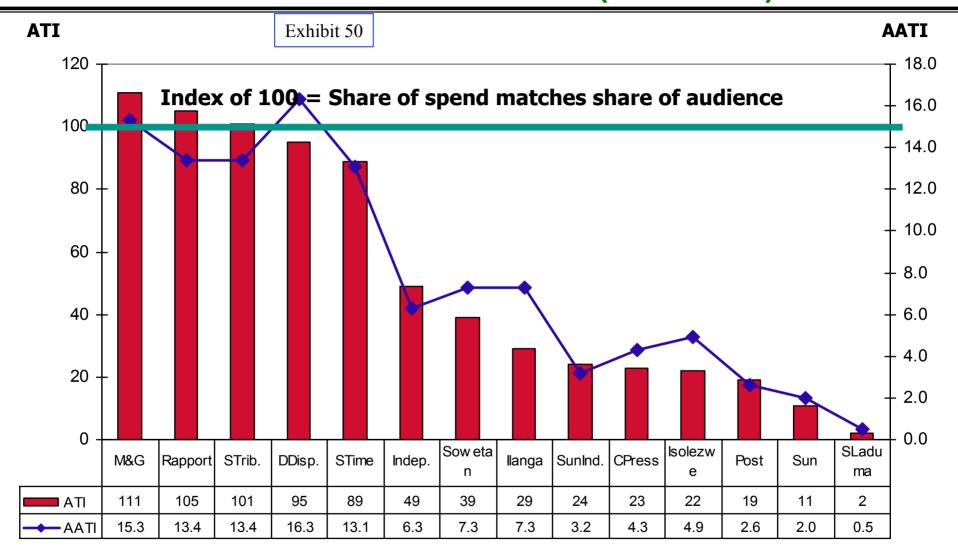

Index of Newspapers Share of 2003 Spend vs Share of Audience (continue)

Comments

- Business and Afrikaans titles sit at the top
- A few thoughts as to why....
 - Niche titles seem to have the advantage over the "generalists"
 - Business is probably the largest "niche" advertising sector.
 - Afrikaans publications all seem to be receiving a disproportional advertising share – perhaps this is the 2nd most desirable sector
 - There is chronic fragmentation within the English titles even though this is bi and large regionally driven.
 - The broad reaching (Sunday) titles all seem disadvantaged
 - The economics advertisers want the few with money.
 - Familiarity planners go with what they know.
 - It must also be noted that recruitment, notices and tender advertising is not captured by Adex and for titles such as Sunday Times this lucrative source of revenue could significantly change the picture.
- Definite disadvantage for newspapers targeted at the black population, even taking LSM's into account
- The Sunday / Daily Sun has not matured enough to bring in advertising, this skews the picture somewhat

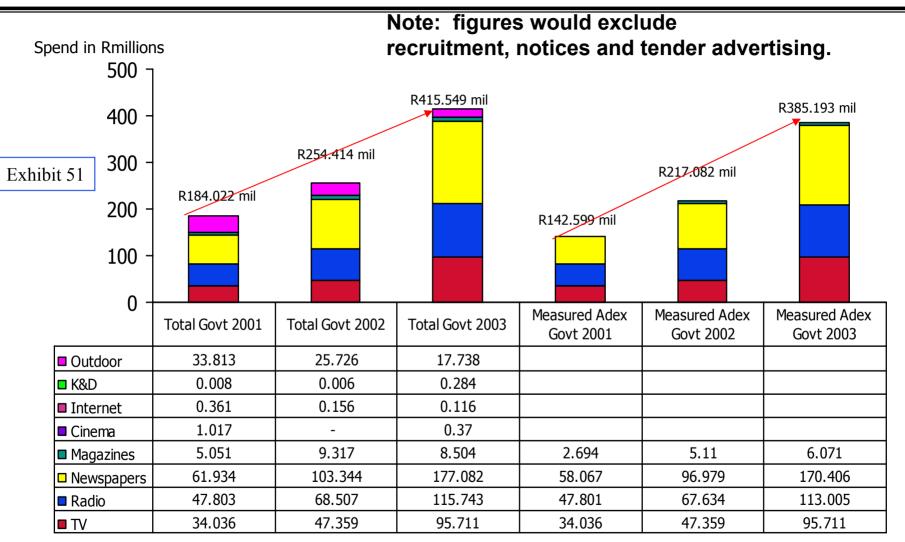

8. Government spending in 2001 to 2003

8.1 Government Adspend 2001 to 2003 by Medium

8.2 Comments

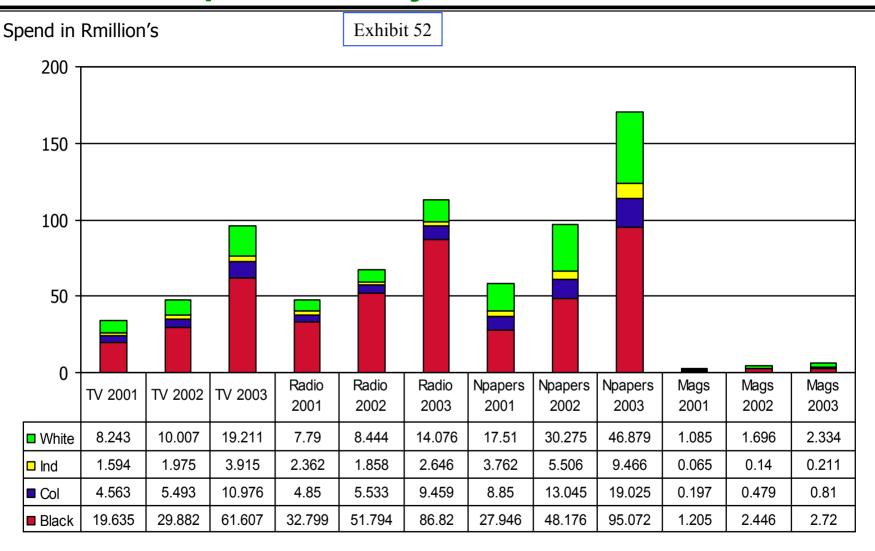

- While only 70% of the Government 2001 ATL advertising could be measured, this has now risen to 93% in 2003 because of greater spending on television
- Government recruitment is estimated to be worth an additional R30 million
- Outdoor which is a significant medium carrying R18 million cannot be accurately proportioned by race or LSM
- As with the rest of the study, communication other than Above the Line advertising spending is not included.

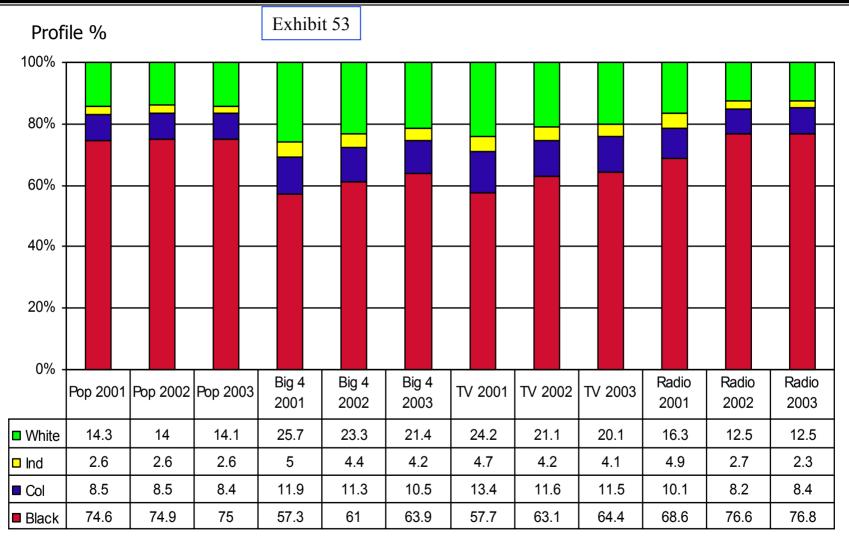

8.3 Government Spending by Medium Proportioned by Race: 2001 to 2003

Government Spending Profile vs. Population and Audience Profile: 2003

8.14 Comments

- Government seems to have done a somewhat better job than commercial advertisers, but still fall short of addressing all citizens equally. We believe that Government is not seeking a return on investment but rather to inform, educate and change attitudes, and its overall communication effort should reflect this.
- There is no doubt that the inclusion of outdoor into the analysis could improve the Government spending much further.
- Government Magazine adspend falls particularly short possibly as a result of the trade focus of this medium as well as the limited availability of Black skewed titles.

9. Conclusions

9.1 Conclusion

- Clearly there is growth in the advertising industry.
- It is quite clear that the advertisers chase the outlets that are targeted at higher LSMs.
- The Gap between adspend and audiences is not closing fast enough if at all.
- Overall ATL measured advertising does tend to favour those consumers within the higher LSM groups.
- It must be noted that the proportioning of outdoor and BTL spending could vastly alter the spending landscape.
- Those media vehicles (across all media types) that have upper income profiles tend to do better and receive disproportional advertising.
- Should the base pricing strategies of media owners come under the spotlight? Can media owners set their rates based on all consumers being equal, or can media owners ask more for high income consumers and unique editorial environments.
- Government spend also needs to focus on distribution of adspend to those platforms that have previously been ignored by advertisers and media planners.
