5.1 Identification signage

5.1.1 Pylon

The pylon is the primary element of the signage range, and should be positioned in prominent locations. Pylons should always feature the departmental logo at the top. Viewing distances must always be taken into account to ensure legibility. Also be aware of any obstructions which may impair visibility.

Material and Structure

All materials have been considered for the durability, ease of maintenance and manufacturing qualities, which is why external signage must be made of aluminium.

For assistance in choosing materials contact the GCIS.

Note: See control grid in Section 3 on page 37.
